Window Sticker Demo Guide

Oct 27, 2026 · @Wesley

The pitch in one breath

The sticker turns your regulars into your marketing. A customer scans it, saves your store, and every friend they have in FavCircles sees it; no ad, no post, nothing for you to do.

Say it in the owner's terms, not the app's:

> "Here's a sticker for your window. When a customer scans it they save your store in an app that shows their friends and family the places they trust. You end up on the map of everyone connected to them. It's free, I'll set it up right now, and all I want back is your honest feedback."

Then stop talking and show the phone. The app is the proof; describing it is not.

The 3-minute demo

Demo on your own phone, on a store that is already set up, never on theirs. Every step is one screen and one sentence.

1. **The sticker scan (30 s).** Hold up a sticker and scan it with a phone that does not have the app. The App Clip opens: sign up, get 100 points at this store. Say: "That's your customer, 20 seconds, no app download."
2. **The saved store (30 s).** Open the store's place page. Point at the photo, hours, the Reserve or Order button. Say: "This is you, in their circle of favorites. Nothing to maintain."
3. **The friend's view (30 s).** Switch to a second account that follows the first and open its home map. The store is on it. Say: "Their sister sees it on her map. That's the marketing."
4. **The storefront controls (45 s).** Open the owner's Manage page: announcements, specials, menu, photos, hours. Post a one-line announcement live. Say: "You change this from your phone in the time it takes to write a text."
5. **The register card (45 s).** Scan the register card from the customer account. Points land. Open an offer ("Free coffee at 250 points"). Say: "Scan at the register, points add up, the reward is yours to set."

6. **Stop.** Hand them the sticker. Ask: "Where in the window would you put it?" A placement question gets a yes more often than "interested?"

If they're busy, do steps 1, 3 and 6 only. That is the whole argument in 90 seconds.

What the owner gets

Three things, in the order they care about them.

1. Customers who market the store by saving it. A save is not a review they have to earn; it is a quiet recommendation to everyone connected to that customer. Every saver puts the store on their friends' and family's maps, in their feeds when they check in, and in "places my people like" searches. The sticker is how saves start: 100 points for signing up at the store, 50 for saving it.

2. Control of their storefront. Once the store is claimed, the owner, not Google, decides what the page says: photos, hours, a Reserve/Order/Book button, their menu (photographed once, every item searchable), announcements and specials that reach followers' feeds and the Locals tab. Changes are live the moment they're saved.

3. A loyalty program at the register. A card by the register; customers scan after they pay; points add up per store (25 a scan by default, the owner sets the rate); the owner creates the rewards ("5th coffee free", "$5 off at 300 points") and sees who comes back and how often. No punch cards, no hardware, no POS change.

The owner's stats page shows the loop working: saves, visits, redemptions, followers, who saved the place. Show it on a store with numbers, not on an empty one.

The ask

Three small yeses, in this order. Each one makes the next easier.

1. **The sticker in the window.** Eye level, on the door or beside it, where someone waiting in line can scan it. Free, today, two minutes.
2. **Claim the store.** Their email becomes the owner account. You can set it up on the spot from your phone (cover photo, hours, buttons) and hand them the keys.
3. **Honest feedback.** Ask the same three questions at every store and write the answers down: Would you pay for the loyalty program after the free period? What would make you say yes? What did a customer say about it?

What's free and what isn't. Be exact, so nobody feels sold:

	Free	Business, $49.99/month
Window sticker and sign-ups	Yes	
Claimed page: photos, hours, Reserve/Order/Book buttons	Yes	
Stats at a glance (saves, visits, followers)	Yes	
Specials, announcements		Yes
Register card and loyalty rewards		Yes
Full menu, gallery, order-ahead		Yes
Who-saved / who-follows lists, monthly trends		Yes

Founding-partner offer. The loyalty program is the part owners want and the part that costs money, so for the first 20–30 stores, comp Business for 90 days in exchange for the sticker and the feedback. Say it plainly: "Free for three months, then $49.99 a month if it's earning its keep. I'll show you the numbers before you decide."

Objections and honest answers

They say	You say
"Nobody has this app."	"True, and that's why the sticker matters: it signs people up at your counter. Your customers become the first users in this town, and you're the store they saved first."
"I'm already on Google and Yelp."	"Those show strangers a rating. This shows someone the places their own friends go. A friend's save beats four stars."
"I don't have time for another app."	"The sticker needs nothing from you. The storefront takes as long as a text message, and only when you have news."

They say	You say
"$49.99 a month?"	"Only for the loyalty program and specials, and only after 90 days free. The sticker and your page are free forever. I'll show you the numbers before you pay anything."
"My staff won't remember the register card."	"Fair. Let's have two of them scan it now so they've done it once. The card does the asking after that."
"Can I take it down?"	"Any time. Peel it off, nothing else changes."
"What do you get out of it?"	"Stores that use it well pay for the loyalty program. If it doesn't earn you repeat visits, you won't, and I'd rather know why."

Before you leave the store

A store that is set up before you walk out keeps the sticker up. One that is "going to finish it later" doesn't.

- [ ] Sticker on the door or window at eye level, where the line waits
- [ ] Register card next to the card reader, facing the customer
- [ ] Store claimed to the owner's email; they've logged in once on their own phone
- [ ] Cover photo taken in the store today, hours checked, one action button (Reserve / Order / Book) if they have a link
- [ ] Earn rate set and one reward created ("5th coffee free" or "$5 off at 300 points")
- [ ] Two staff members scanned the register card themselves, so they've done it once
- [ ] The three feedback answers written down, with the owner's name and best time to come back
- [ ] Leave-behind on the counter: what it is, the tutorial video QR, your number

Follow up in 7 days, in person, with a screenshot: scans, new savers, repeat visits. A store that sees a number keeps the sticker; one that doesn't peels it off within a month. Then every 30 days until the comp ends, and the decision conversation happens with the numbers on the table, not a renewal email.

The night before

Stickers are per store (each has its own window code and register code), so a generic stack won't work. Prepare the day's list in advance.

- [ ] Pick 6–8 stores on the same few blocks: owner on site, repeat-visit business (coffee, pizza, deli, bagels, bar, gym, salon). No chains, no managers who can't say yes
- [ ] Create each venue on the super-user Store page and print its window sticker and register card; bring a few blanks and a label printer for walk-in surprises
- [ ] Pull each store's current numbers ("12 of our users have saved your place") for the opener
- [ ] Two phones, or one phone plus a second account: a customer account that follows another, so the "friend's map" step works
- [ ] Test a sticker scan on a phone with FavCircles not installed; the App Clip must open and award the 100 points
- [ ] The demo store has a real photo, a menu, an announcement, a reward and some stats; never demo on an empty store
- [ ] Phone charged, cellular data on (store Wi-Fi is not yours); the app shows a weak-signal message rather than hanging, but don't test that at the counter
- [ ] Leave-behinds printed; the three feedback questions on the first page of your notes
